When silver solder melts, it tends to flow towards the area of greatest heat. For thermocouple contacts, see Cold junction thermocouple.

The first step in creating a plumbing assemblage of copper pipes and fittings

It cools very quickly, but moving or blowing on the joint will cause it to deteriorate. Sheet metal work was traditionally done with "soldering coppers" directly heated by a flame, with sufficient stored heat in the mass of the soldering copper to complete a joint; gas torches e.

The heated tubing will draw the melted solder into the joint by capillary action. You can solder without flux, but it is really difficult!
