Figure 1 presents a Chapter 15 schematic of an electric propulsion drive. It has six high speed parallel comm ports which connect with other C40 processors: these are 8 bits wide, but carry 32 bit data in four successive cycles. Aldahas several yearsof experience as accountant Banks and Sport Company. I The interrupt will suspend the main program and run a special interrupt service routine ISR. The energy conversion process is controlled by the DSP Operating Systems drive, which is the core of the electric propulsion. The main difference from a traditional fair-share OS Chapter 15 that the active task with the highest priority will be scheduled for execution; no matter how many other tasks are waiting, or for how long.
