Successively focused attention to complex systems, like auto-organization phenomena and reaction-diffusion dynamics: in this context Turing patterns formation plays a fundamental role. His research activity focuses on both the theoretical and the applied side of complex networks theory e. Currently, I am using Game Theory to study blockchains and cryptocurrencies.

My research interests include the physics of living systems, collective phenomena. In he initiated the then new department for law and computer science, which later became eLaw Leiden. This duality obliged her to rethink multi-level approaches in geography, largely inspired by sociology of networks and physics.

We have begun to explore relations among these ideas, scaling, universality, ontology of ... The original meaning of synchronization has been maintained up to now in the colloquial use of this word, as agreement or correlation in time of different processes.
